Updates of Poster Presentation Sessions

Q: Do proceeding participants have to prepare poster?
A: Yes, as we noted on the “Remark 1” in the Abstract/Proceeding submission guideline (http://proteinsocthai.net/symposium/2018/abs_pro_guide.php).

“Poster presentation is required for all accepted Abstracts/Proceedings.”

Q: How to do poster presentation?
A: There are 2 poster sessions, “odd numbers session” for odd number poster presentation (August 7, 15:30-16:30) and “even numbers session” for even number poster presentation (August 8, 13:00-14:00). Please stand by at your poster during your designated session, our committee will look around all the posters and request you to present your poster. Please do your best, you will have a chance to win the Poster Awards. The award winners will receive the award certificate and gratuity.

Q: How to identify your poster number?
A: The poster number is assigned by the last digit(s) which follows your registration number.

<table>
<thead>
<tr>
<th>PP001</th>
<th>Chris Verathamjamras</th>
</tr>
</thead>
<tbody>
<tr>
<td>PP0011</td>
<td>Serum O-GlcNAcylated protein as a potential biomarker of colorectal cancer</td>
</tr>
</tbody>
</table>

This is the poster number

From the example above:
- the poster number of Chris Verathamjamras (PP001) is no. “1”
- the poster number of Ratchanok Kramsranoy (PP011) is no. “2”

Q: When should I set up/remove my poster?
A: Please set up your poster on the first day before noon and post it for at least 2 days. You may remove your poster at the end of the second day or the last day after coffee break until 1 pm. For those who win poster awards (which will be posted on the posters at the end of second day), please retain them until the third day and receive your awards at the Closing Ceremony.
POSTER PRESENTATIONS

PP001-1  Chris Verathamjamras
Serum O-GlcNAcylated protein as a potential biomarker of colorectal cancer ........................................39

PP011-2  Ratchanok Kramsranoy
Impact of food contaminants on chemosensitivity of human hepatocellular carcinoma cells ..........40

PP012-3  Phichamon Phetchahwang
Investigation of synergistic effect of O-GlcNAc inhibition and cancer drugs on colon cancer stem-like cells ........................................41

PP016-4  Aimorn Homchan
Biochemical and biophysical characterization of a novel DNA-protein crosslink repair protease Wss1 from Candida albicans ........................................42

PP019-5  Yanakorn Thephabet
Development of protein expression of recombinant N,N-8-amino-8-demethyl-D-riboflavin dimethyltransferase (RosA) in E.coli as a catalytic machinery for syntheses of antibiotics and flavin-derivatives ........................................43

PP024-6  Wachira Chinantuya
Characterization of 2-oxo-hept-3-ene-1,7-dioic acid hydratase from Acinetobacter baumannii ........................................44

PP027-7  Salila Pengthaisong
Nucleophile mutants of Thermoanaerobacterium xylanolyticum TxGH116 β-glucosidase for glucoside and oligosaccharide synthesis ........................................45

PP028-8  Kadsada Sala
Expression of GH3 β-xylosidase from rice (Oryza sativa l.) in Pichia pastoris and characterization of its enzymatic properties ........................................46

PP029-9  Meng Huang
Cloning and expression of a BAHD acyltransferase from rice ........................................47

PP034-10  Rungdawan Wongsamart
Study of chaperonin 60 subunits assembly process ........................................48

PP043-11  Ratana Charoenwattanasatien
X-ray crystallographic and high-speed AFM studies of peroxiredoxin 1 (CrPRX1) from Chlamydomonas reinhardtii ........................................49

PP044-12  Manatchanok Kongdin
Rice Os4BGlu12 and Os4BGlu13 function as ABA-GE β-glucosidases ........................................50
